

imageWARE CASE STUDY

Central Bucks School District Streamlines Hiring Process with imageWARE®

Central Bucks School District faced a daunting challenge in managing over 1,000 applicant resumes across the school district. With over 40 people involved in the hiring process located in over 20 different buildings, the process was bottlenecked with manual systems including interoffice mail and in-person deliveries.

imageWARE®, an innovative document management solution, captured, organized and managed the hiring process, saving Central Bucks School District valuable time and expedited the search for qualified school personnel.

"We have created a seamless resume management system with imageWARE. We can share resumes and files across 20 different locations. We have reduced a process that normally took days to minutes."

Pam Spangler, Central Bucks School District

With imageWARE, all professional and support staff resumes are scanned at the administrative office and placed on the network - making them immediately available to all hiring personnel from their desktop. imageWARE provides a completely searchable database of all the resumes, so to find qualified candidates, you simply enter the criteria and all applicable resumes appear on your screen. From that point, they can be immediately printed and reviewed. Another added value is imageWARE's annotation tool where notes can be attached to each resume - allowing all involved hiring parties to communicate efficiently.

After seeing the possibilities of imageWARE, the school district is now researching other departments and how this same technology can help save time, reducing filing space and increase the functionality of their operations.
