NOTE: This is a suggested guide on obtaining optimal copy quality results from the color imageRUNNER C5180 series copiers under various configurations/or settings. Actual results will vary depending on such factors such as environmental conditions and maintenance of the machine.

*1 - Although the CiRC5180 Series Manuals state that Glossy media needs to utilize either Glossy, Heavy 1 or Heavy 2 modes, CUSA has found when using the above media types, Plain Paper mode resulted in good color output without long term negative adverse print quality effects.
