

OVERVIEW

SAP is a leading supplier of enterprise resource planning software to many of the world's largest corporations. Through the implementation of SAP® R/3® software, users can manage data for all their enterprise business applications, including management of sales and customer relationships, supply chains, finances, business intelligence, and human resources.

The nature of SAP implementations is such that information is viewed and printed in a structured reporting format where the printing is done through an SAP subsystem printing driver that overrides a manufacturer's proprietary drivers. Because of this, printing functionality is either non-existent or extremely limited. Recognizing the limitations this puts on their mutual customers with Canon, SAP created a development initiative that resulted in "Device Types." These are configuration files that enable the application of device controls to the PCL and PostScript® data streams generated in SAP, therefore providing access to Canon extended printer functions. Organizations will not only enjoy the benefits of running SAP applications with productive office workflow but also take advantage of the feature-rich functionality offered by Canon imageRUNNER® and imagePRESS® devices.

BENEFITS:

- Ensures validity with SAP customers, as the solution is defined and supported by SAP.
- SAP customers have access to high-speed, high-quality finishing functionality offered by Canon imageRUNNER devices and realize return on investment while printing professional documents, in monochrome or color, from SAP applications.
- Enterprise printing can become more decentralized.

Disclaimer

Solution Allies are those companies—typically enterprise software application providers—that have, in some way, recognized Canon products as functioning properly in collaboration with their own products or solutions. In many cases, these Solution Allies have included Canon products in their own certification programs, the nature of which can be found on the Solution Allies' respective Web sites. Canon presents these Solutions Allies to help customers identify software environments in which Canon products may function properly. However, Canon does not warrant or guarantee these third-party solutions and products or their compatibility with Canon products in any way. Canon urges potential customers to study the Solution Allies' own statements with respect to compatibility.
